

HAT®-SNAP Active Containers

Moisture Protection for Test Strips and Nutraceuticals

Diagnostic test strip accuracy is important to support diagnostic testing and the subsequent treatment of patients. Specific protection against moisture is essential to avoid degradation of enzymatic reagents in strips, maintaining shelf life and accuracy for these moisture sensitive products.

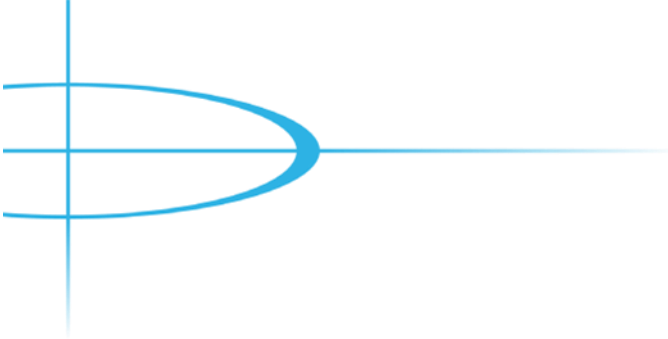

Many dietary supplements and probiotics also require adapted packaging to protect against moisture and avoid degradation.

Taking advantage of expertise in packaging design for the healthcare market, HAT®-SNAP, Handy Active Tube, an ergonomic flip-top container has been developed to package and protect test strips and nutraceuticals from moisture. To meet a range of application needs, moisture protection is integrated as a raw desiccant in the stopper.

HAT-SNAP: Container + Standard Tamper Evident Desiccant Stopper

- Easy-snap closure onto the container
- Tamper evident closure
- Desiccant is customizable to include silica gel or molecular sieve, or a combination of both to achieve desired performance

With an easy grip and straightforward open-close features, the HAT-SNAP active vial is convenient and designed to increase consumer appeal, whilst enhancing product shelf life.

The flip-top closure is specifically designed to fit directly with the container to keep the pack integrity and optimally control moisture vapor transmission into the package. Integrated in the closure, the desiccant adsorbs any headspace moisture as well as any moisture that ingresses during shelf life.

Primary features:

- Adapted for automated filling lines
- Easy handling
- Easy opening
- UV protection
- Tamper evident
- Customizable sorbent

HAT-SNAP Active Containers are compliant with US FDA, NMPA and European regulations for use in pharmaceutical, nutraceutical and diagnostic applications.

Regulatory compliance may vary depending on the country and end-use application, please contact your Colorcon representative for more information.
